Equipment design features

Air separation method

Plant perform cryogenic air separation, through low temperature distillation. Characteristics of this method:

- high purity products;
- high recovery ratio;
- low power consumption;
- production of products in gaseous and liquid forms;
- simultaneous production of more than one product;
- multi-duty operation.

Materials and components

In plant construction, only high quality and durable materials and components are used. Cryogenic parts and equipment inside distillation columns are isolated with special insulation to minimize heat loss.

Know-how and innovation

SIAD Macchine Impianti uses its own know-how for the innovative cryogenic plant design. Top priorities: research and development, continuous improvement in efficiency and up-dating technology.

Complete compliance with local and or international standards. Tailor-made solutions to meet all production requirements.

Automatic control system

Advanced PLC based automation:

- providing maximum effectiveness of the plant (optimization);
- automatic monitoring of normal operation mode (without operator supervision);
- automatic data logging (archives for diagnostics);
- guarantees safety and reliability of the equipment;
- tele-control of the plants from producer's side.

Easy installation

Plants are shipped in modular section for easy and low cost installation. The equipment is installed as enlarged modules, which are then connected during installation on site with the minimum number of interfaces on pre-fabricated foundations. As a consequence, there is a reduction in the cost of installing and commissioning. An option is available for commissioning test, start-up and performance test, performed on site under the careful supervision and responsibility of SIAD Macchine Impianti's expert site engineers.
